

Feature Enhancements

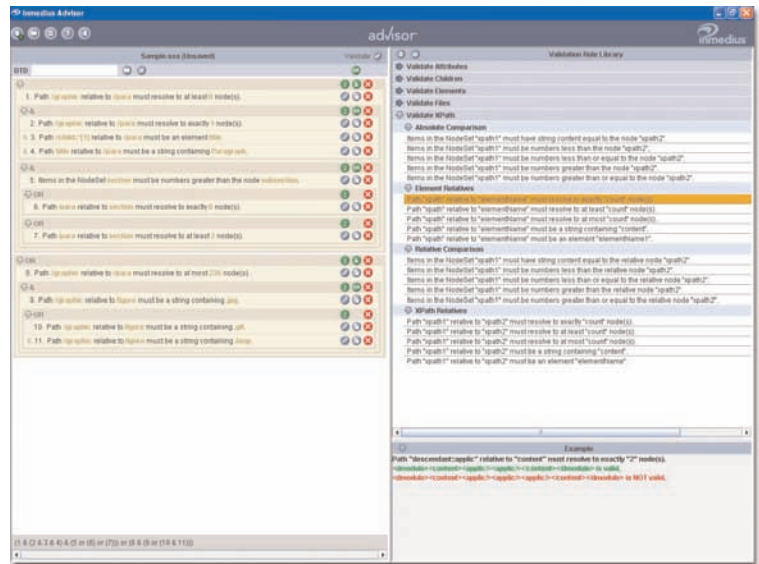

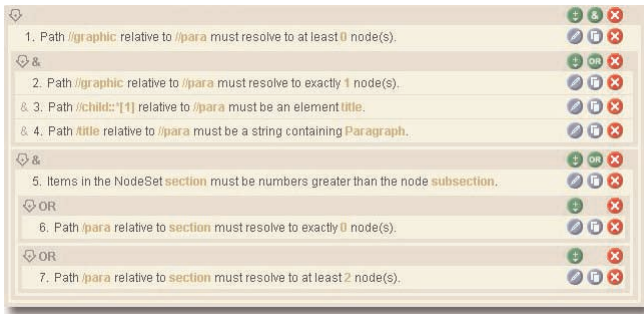

Advisor v1.1 is the latest release of Inmedius' SGML/XML Quality Assurance Solution and includes features and enhancements requested by our valued clients. This document highlights, illustrates and briefly describes the updates included in the new release.

Rules Expanded for XML Path Language (XPath) Queries

In addition to providing easy to use, "out of the box" rules, Advisor v1.1 users can now select an XPath rule and customize it to meet complex organizational validation requirements. XPath is a language for finding information and navigating through elements and attributes in an XML document.

Combine Rules Using AND/OR Logic

Advisor v1.1 allows users to logically group validation rules into AND/OR combinations.

Quickly create content using pre-defined validation templates for Attributes, Children, Elements, Files and XPath. Advisor is completely configurable to the user's quality assurance requirements, and features a broad collection of validation templates that ensure authored SGML and XML content adhere to pre-defined business rules and standards.

Expanded Attribute and Reference Validation Options

Three additional rules extend the ability to check, verify and compare attributes:

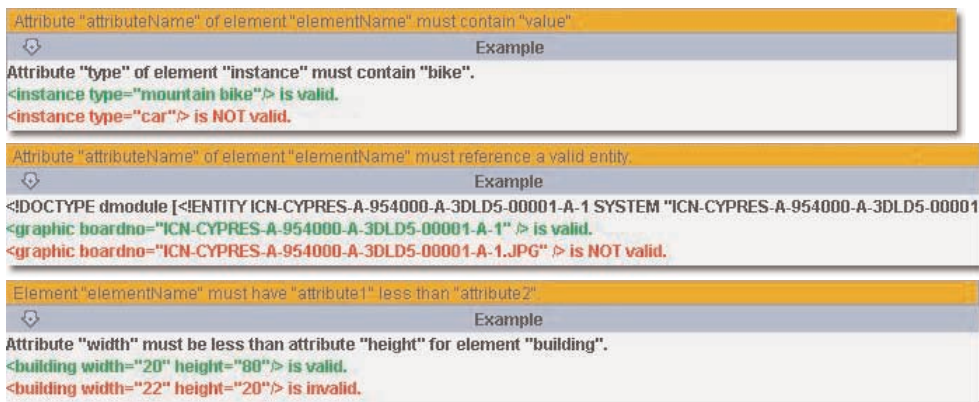

- Check that an attribute is in a set of values
- Verify that attributes that should reference entities are referencing valid entities
- Compare two attributes as less than or equal to each other

The Power of Integration

For a complete document lifecycle solution, Advisor Server now integrates seamlessly with both Inmedius S1000DmanagerTM and Inmedius HorizonTM. Manager, part of the seven-module Inmedius S1000D

Publishing SuiteTM, is a comprehensive management system offering extensive features that provide a framework for controlling the development of technical data utilizing S1000DTM publishing concepts. A business process driven solution, Horizon is a technical publication production system that delivers the tools and information needed to comprehensively manage a technical documentation operation.
